

## What is the Difference Between Value-Based Payment and Value Based Purchasing

**Value-Based Payment** is a system that promotes quality outcomes and improved health versus a Fee-for-Service payment method or payment based on the number of patients that are treated in a given timeframe.

**Value Based Purchasing** is a strategy to measure, report, and reward excellence in healthcare delivery. Effective health care services and high performing health care providers are rewarded with an increased reputation through public reporting, enhanced payments through reimbursements, and increased market share.
